

## Solution Map

Basic Functions	Generate material variants		Price overview		Creating further positions		Variant matching		Trading functions			
Generate material variants	Generate / change Material variants		Bill of material/ routing		Workflow		Customer-material info record		Classification		Conditions	
PP - master data	Assignment to maximum bill of material and maximum routing					Generation of discrete PP-masterdata: Bill of material, routing						
Valuation material variants	Material calculation				Planning flag of the calculation				Release of the calculation			
Price overview	Price overview for all Alternative positions				Update price changing in documents				Simulation of the price changing			
Sequence process	Swapping material numbers while generating with regard					Reject configuration position and Generate position with material variant						
Trading-functionality	Select accounts payable		Generate MM-inquiries		Maintenance MM-offers		Price comparison		Generate MM-order		Administrate purchasing info record	
Settings	Customizing					ABAP-Formulas (Userexits) for complex derivations						
Generate positions	Generate alternative positions (copy of the configuration)				Generate the main positions (copy of the configuration)				Calculate the new positions			
Levels	Single-Level configuration					Multi-level configuration
